

Master Bedroom—
Center Window in room

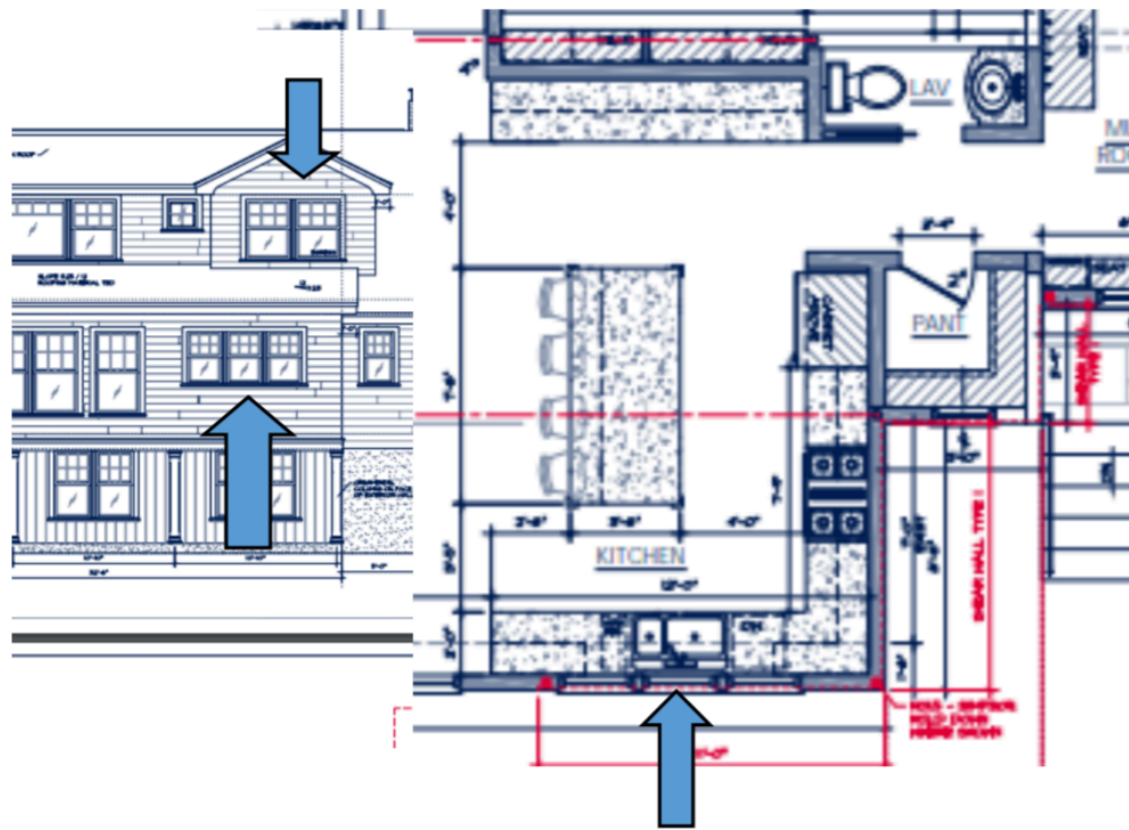

Spare Bedroom—NO transom needed/wanted

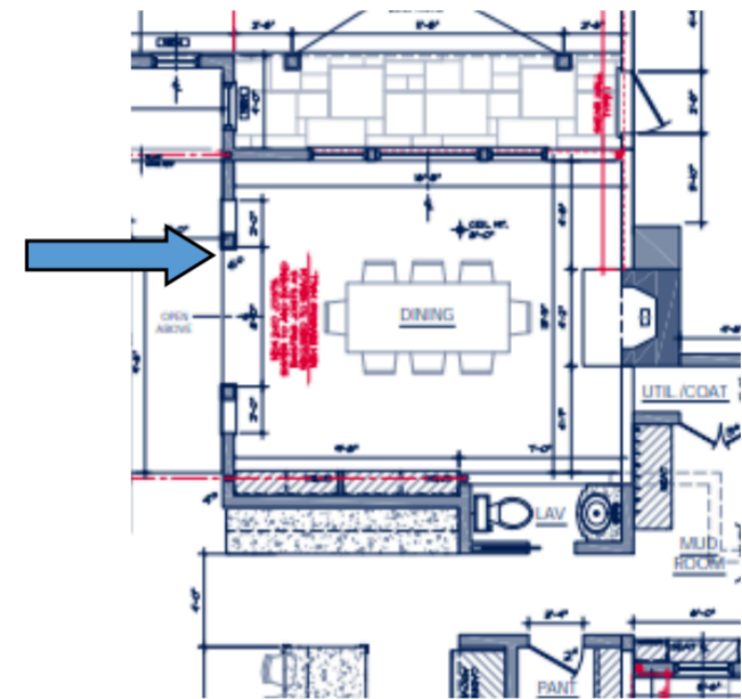

Kitchen to Dining Room— Center “PASS THROUGH” - no door just plastered opening (no molding) I will bring Utility cabinets up to this opening. It will be in line with walk space in kitchen.

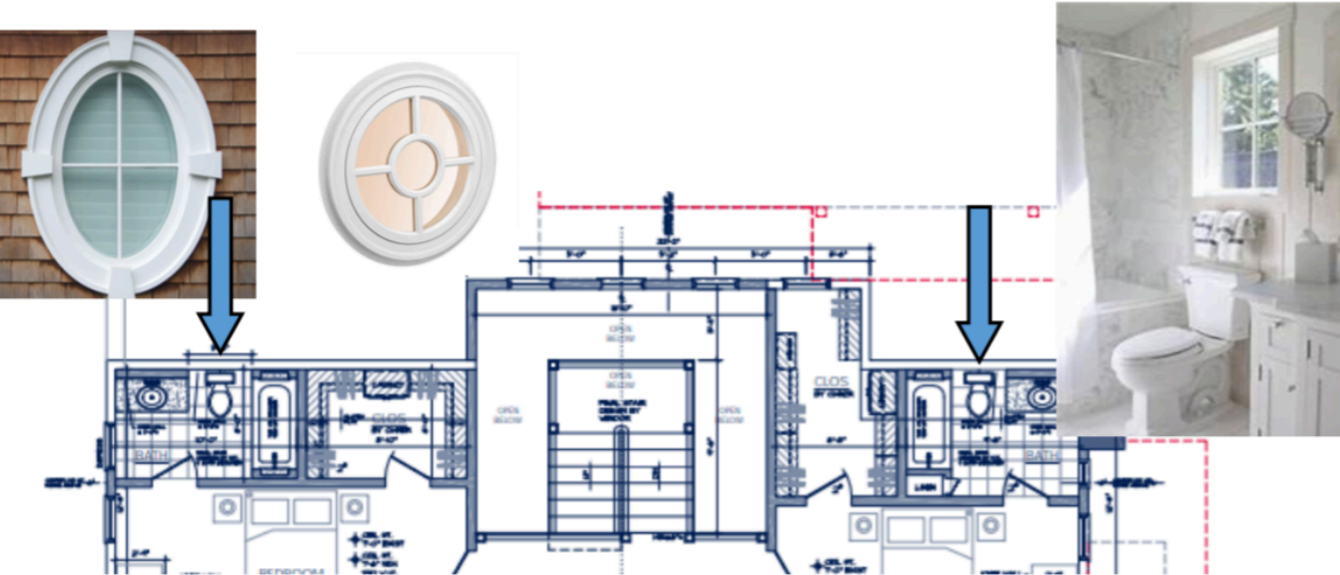

Kitchen— Change to a double window to match bedrooms above—This is to allow room for cabinets

-we will discuss these columns—I have drawings and will go over this with you but we like the idea—I want to match it to the front of the home.

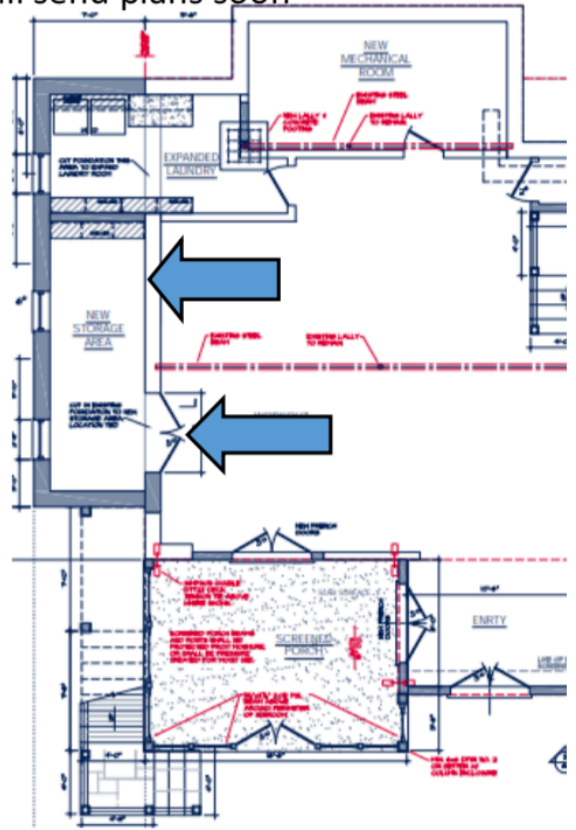

Windows Added in Boy's Bathrooms (over toilet)—I would like to see a square, round or even an oval based on "look" from front of home—this needs to be discussed with Melissa regarding : Cost- and look of home— when plans are shown for front—or to match windows over foyer (Ben I would like your input here)

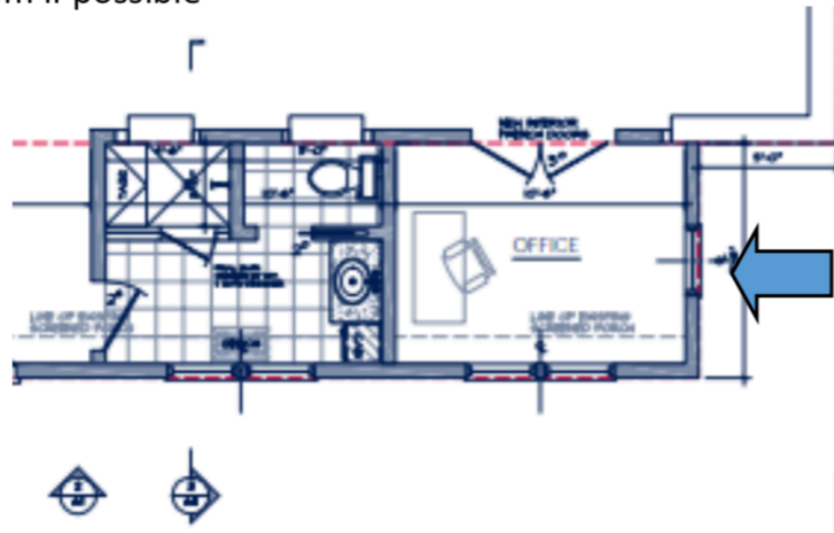

Basement— These doors will be put back where they were and will be accessible through the new workout room—will send plans soon

We will be putting up walls for the workout room—I have this up on CAD but have a virus in the system—will send shortly—

Is it possible to make this “office” a little larger? I’m not sure if this is a knee wall—or just the outdoor overhang—but Melissa loves that it could be used as a spare bedroom (we discussed the 5 bed septic plan) we will not add a closet at this time—but would like a little more room if possible

SCALE: 1/4"=1'-0"

We can rearrange/steal some room from bath if needed to make spare room larger—I will work up plans and send along shortly
